The age of onset of non-congenital inherited eye disease varies in different breeds and between individual dogs. It is therefore important to follow any advice given at the time of this examination with regard to the necessity for and frequency of eye examinations as set out in the 'Information for Owners' document available from AVA at www.ava.com.au/aces. "Affected" signifies that there is visible evidence of the inherited disease(s) specified, whereas "Unaffected" signifies that there is no such evidence.

I have examined the above animal (and confirmed its identity) under the Rules of the AVA-ANKC Australian Canine Eye Scheme, with results as shown. Interpretations of eye signs as reported in this form are those of the individual panellist and do not necessarily reflect the opinion of all registered specialists.
